

30-Day Evaluation Unit Agreement

ATA may, at its sole discretion, make evaluation units available for customers to assess the performance and suitability of ATA standard products for their particular application. Units may be ordered at the stated single unit product price plus shipping and handling for the specific sensor model from Albuquerque, New Mexico. Evaluation units are available upon receipt by ATA's order department of an approved credit purchase order, or company or bank check from the ordering company for the cost of the sensor, accessories and shipping, plus a customer signed copy of this policy acknowledging terms, conditions, and customer responsibility for evaluation units.

Evaluation orders must stipulate "30-day evaluation", and if so stated in writing on the order, units may be returned complete and undamaged, freight prepaid by customer, at any time within the 30 days for full credit of sensor price. Outbound shipping charges will not be credited. Units not returned within 30 days of customer receipt are not returnable. Returned units must contain all components including cables, calibration sheet, and accessories plus a copy of the original packing slip. Units returned without all components will be assessed a charge for refurbishing, handling and billing. The refurbishing charge will be actual cost of damaged or missing components plus \$50 labor.

The purpose of the 30-day evaluation period is to insure that the ATA product works in the customer application, and to allow the customer to evaluate performance in the planned application. These units are not intended for use in life testing, environmental testing, or other potentially destructive evaluation processes. The maximum number of units of any single type of ATA sensor which may be ordered under the 30-day evaluation policy is one per customer.

Evaluation units carry ATA's standard warranties from date of purchase. This Warranty does not apply to units used in life testing, environmental testing or other potentially destructive tests.

Correct application of power and interface signals are the responsibility of the customer, and units damaged by incorrect connection, application or levels of power are not covered by warranty. Units damaged by incorrect power use or abuse are not subject to return credit under this evaluation policy. Return packing and shipment are the responsibility of the customer. Units damaged in return shipment are the responsibility of the customer and claims with the shipping company or carrier shall be made by customer/shipper.

I have read and agree to these terms and conditions.
